SUMMARY REPORT
HIGH-CRASH ROAD SEGMENTS
AND INTERSECTIONS
IN TOMPKINS COUNTY, NY

May 27, 2015
Prepared by ITCTC

TABLE OF CONTENTS

Summary	1
Data Description	1,2
Map Description/Data Format	3
Highest Crash Rates in Tompkins County	5
Highest Crash Severity Rates in Tompkins County	8
Highest Crash Rates by Jurisdiction in Tompkins County	11
Highest Crash Severity Index by Jurisdiction in Tompkins County	23
Bicycle Crashes in Tompkins County	35
Pedestrian Crashes in Tompkins County	37
Deer Crashes in Tompkins County	39
Crashes Sorted by Town in Tompkins County	41
Town of Caroline Crashes	42
Town of Danby Crashes	45
Town of Dryden Crashes	48
Town of Enfield Crashes	51
Town of Groton Crashes	54
Town of Ithaca Crashes	57
Town of Lansing Crashes	60
Town of Newfield Crashes	63
Town of Ulysses Crashes	66
City of Ithaca Crashes	69

This year the Ithaca-Tompkins County Transportation Council (ITCTC) analyzed traffic accident data for the second time. The traffic accident data was downloaded for each municipality from the New York State Department of Transportation (NYSDOT)'s ALIS database (Accident Location Information System) for the years 2008 through 2013. This database utilizes all crashes reported to the Department of Motor Vehicles (DMV).

The methodology used by the Mid-Ohio Regional Planning Commission (MORPC) was used as a guide in the analysis. The formulas used by MORPC were developed in coordination with local transportation engineers and planners in their region, as well Ohio Department of Transportation representatives. The following steps were used in the analysis:

Road Segments:

- ITCTC aggregated all crashes on **road segments** throughout Tompkins County. Any accidents within 250' of intersections were excluded here.
- Only road segments that showed at least 6 crashes from 2008 through 2013 (i.e. **1 crash per year**) were included in the next steps of analysis.
- A "Severity Index" was calculated for each road segment. Crashes were weighted according to their severity level, with fatal crashes being the most severe, followed by "serious" injury crashes *, followed by injury crashes, then property-damage only crashes (>$1,000 of damage).
- Severity Index = (12 * # of fatal crashes) + (9 * # of serious injury crashes) + (3 * # of injury crashes) + (# of property damage only crashes) / total crashes.
- A "Crash Rate" (per million vehicles) was calculated – using the most recent traffic counts from NYSDOT, Tompkins County Highway Department, and other sources.
- Crash Rate = total crashes / ((Daily Traffic Volume) * 6 years * 365 days * road segment length * 0.000001)
- Each Road was sorted by 'Crash Rate' and 'Severity Index' for each municipality in a table.
- Also ranked were high-crash bicycle locations, the high crash pedestrian locations and the high crash deer (deer crashes / total crashes) locations.

* NOTE: a "Serious Injury" is defined by NYSDOT as an injury (other than fatal) which results in one or more of the following: (1) severe laceration resulting in exposure of underlying tissues/muscle/organs, (2) broken or distorted extremity (arm or leg), (3) crush injuries, (4) suspected skull, chest, or abdominal injury, (5) significant burns (2nd or 3rd degree), (6) unconsciousness, and/or (7) paralysis.

Intersections (ALIS):

- ITCTC aggregated all crashes within 250 feet of each **intersection** throughout Tompkins County. Any accidents not related to intersections were excluded here
- Only intersections that showed at least 6 crashes from 2008 through 2013 (i.e. **1 crash per year**) were included in the next steps of analysis.
- A "Severity Index" was calculated for each intersection. Crashes were weighted according to their severity level, with fatal crashes being the most severe, followed by "serious" injury crashes *, followed by injury crashes, then property-damage only crashes (>$1,000 of damage).
- Severity Index = (12 * # of fatal crashes) + (9 * # of serious injury crashes) + (3 * # of injury crashes) + (# of property damage only crashes) / total crashes.
- A "Crash Rate" (per million entering vehicles) was calculated for each intersection using the most recent traffic counts from NYSDOT, Tompkins County Highway Department, and other sources.
- Crash Rate = total crashes / ((Daily Traffic Volume) * 6 years * 365 days * 0.000001)
- Each Intersection was sorted by 'Crash Rate' and 'Severity Index' for each municipality in a table.

* NOTE: a "Serious Injury" is defined by NYSDOT as an injury (other than fatal) which results in one or more of the following: (1) severe laceration resulting in exposure of underlying tissues/muscle/organs, (2) broken or distorted extremity (arm or leg), (3) crush injuries, (4) suspected skull, chest, or abdominal injury, (5) significant burns (2nd or 3rd degree), (6) unconsciousness, and/or (7) paralysis.

Intersections (Cornell Police):

- Data was also received for the first time from the Cornell Police Department. This data includes all traffic accidents which the Cornell Police Department responded to for the years 2011 through 2014. This data includes crash locations and pedestrian injury locations ONLY. For intersections where our primary data is from the Cornell Police, therefore, we do not have a crash Severity Index shown – since we have no information on injured drivers or "serious" injuries.

Mapping:

- Two maps were generated for the county showing locations of the top 20 ‘Crash Rate’ and ‘Crash Severity’ locations.

Data Format:

For Tompkins County only:

- ‘Crash Rate’ tables for both the top 20 road segments and the top 20 intersections
- Map of the top 20 highest-crash rate locations
- Crash ‘Severity Index’ for both the top 20 road segments and the top 20 intersections
- Map of the top 20 highest-crash severity locations
- ‘Crash Rate’ tables for both the top 20 road segments and the top 20 intersections for each road jurisdiction*
- Crash ‘Severity Index’ for both the top 20 road segments and the top 20 intersections for each road jurisdiction*
- ‘Highest Bicycle Crash’, ‘Highest Pedestrian Crash’ and ‘Highest Deer Crash’ tables

For each Municipality:

- ‘Crash Rate’ tables for both the top 10 road segments and the top 10 intersections
- Crash ‘Severity Index’ for both the top 10 road segments and the top 10 intersections

*NOTE: “road jurisdiction” means the entity who owns and maintains the road: State, County, Town, City, Village, or Private.
