

## Rabies Control Program

There were two rabid skunks during the month confirmed by the New York Wadsworth Laboratory. The skunks were fighting each other and involved contact with a human. The person received rabies treatment.

<b>Key Data Overview</b>

<b>Rabid Animals (Lab Confirmed)</b>	2	6	6	8

<sup>1</sup>"Bites" include all reported bites inflicted by mammals and any other wounds received while saliva is present.

<sup>2</sup>"Non-bites" include human exposures to saliva of potentially rabid animals. This also includes bats in rooms with sleeping people or young children where the bat was unavailable for testing.

<sup>3</sup>When an otherwise healthy, unvaccinated pet has contact with a rabid animal, or suspect rabid animal, that pet must be quarantined for 6 months or euthanized. Quarantine must occur in a TCHD-approved facility (such as a kennel) at the owner's expense. If the pet is still healthy at the end of 6 months, the exposure did not result in rabies and the pet is released.

<sup>4</sup> Pets must be euthanized if they are unvaccinated and have been in contact with a rabid or suspect rabid animal and begin to display signs consistent with rabies. Alternatively, a pet is euthanized if a prescribed 6-month quarantine cannot be performed or the owners elect euthanasia instead of quarantine.
