Department of Transportation, Region 3

Financial Assistance for this study was received from the Federal Highway Administration, the New York State Department of Transportation and Tompkins County

Summary

This report includes AADT (Annual Average Daily Traffic) traffic count information for the state, county and local roads in Tompkins County for which traffic count data was obtained in 2025. Count locations in this report are different from those provided in the 2024 Traffic Count Report.

Data Description

Traffic count data for 22 State, 67 County, and 26 local road segments (totaling 115) are included in this report. All of the 115 counts were taken by the New York State Department of Transportation (NYSDOT). The traffic counts in this report represent the combined total of all lanes of traffic on each road. Therefore, both directions of travel are combined on two-way roads.

There are four traffic count tables in this report. All four traffic count tables present the same data, each sorting the data differently. In the first table (pages 6 through 10), the data is sorted by an alphabetical listing by count station location name (road name). In the second table (pages 11 through 15), the data is categorized in numerical order by road number- with the local roads first, followed by the County roads, followed by the State roads. The "road number" is as listed in the NYSDOT Local Highway Inventory (LHI). In the third table (pages 16 through 20), the data is sorted by municipality. In the fourth table (pages 21 through 25), the data is sorted by count station number.

The report includes the following data (column header descriptions are shown in **bold**):

> **Station**: The number of the Traffic Count Station where the count was measured. The State station numbers are the last 4 digits as shown on the actual traffic count. The county and City of Ithaca station numbers were taken, wherever possible, from the NYS DOT's Local Highway Inventory (LHI) count designation for that road segment link.
>
> **Road #**: County roads are listed with the County Route (CR) number as a prefix. State roads are listed with the State Highway (NY) number as a prefix. Local roads are listed with their LHI designated road number.
>
> **Count Location**: The name of the road where the traffic count was measured.
>
> **Muni**: The city, village or town(s) where the count was measured. The prefix "C/", "V/" or "T/", indicates city, village or town, respectively.
>
> **FROM / TO**: A description of the road segment's beginning and end describing where the count was measured. Where possible this description matches the NYS DOT's Local Highway Inventory information.

AADT: The annual average daily traffic (AADT) is the number of vehicles that would be assumed counted on a "typical" day of the year. Based on established formulas, a measured traffic count is factored to an AADT by adjusting it for seasonality and vehicle classifications. Adjusting for seasonality is necessary because each season undergoes an increase or decrease in traffic volumes. Counts are adjusted for vehicle classifications since trucks with three or more axles appear as several cars to the counters.

Last Ct: The AADT of the most recent count taken on the same road segment as the 2025 count.

Year: The year of the most recent count taken on the same road segment as the 2025 count.

%Chg: The % increase or decrease in AADT when comparing the 2025 count to the most recent count taken on the same road segment.

1st Ct: The AADT of the earliest count taken on the same road segment as the 2025 count.

Year: The year of the earliest count taken on the same road segment as the 2025 count.

%Chg: The % increase or decrease in AADT when comparing the 2025 count to the earliest count taken on the same road segment.
